

LME49720 Dual High Performance, High Fidelity Audio Operational Amplifier

1 Features

- Easily Drives 600Ω Loads
- Optimized for Superior Audio Signal Fidelity
- Output Short Circuit Protection
- PSRR and CMRR Exceed 120dB (typ)
- SOIC, PDIP, TO-99 Metal Can Packages
- Key Specifications
 - Power Supply Voltage Range: ± 2.5 to ± 17 V
 - THD+N ($A_V = 1$, $V_{OUT} = 3V_{RMS}$, $f_{IN} = 1$ kHz):
 - $R_L = 2k\Omega$: 0.00003% (typ)
 - $R_L = 600\Omega$: 0.00003% (typ)
 - Input Noise Density: $2.7nV/\sqrt{Hz}$ (typ)
 - Slew Rate: $\pm 20V/\mu s$ (typ)
 - Gain Bandwidth Product: 55MHz (typ)
 - Open Loop Gain ($R_L = 600\Omega$): 140dB (typ)
 - Input Bias Current: 10nA (typ)
 - Input Offset Voltage: 0.1mV (typ)
 - DC Gain Linearity Error: 0.000009%

2 Applications

- Ultra High Quality Audio Amplification
- High Fidelity Preamplifiers
- High Fidelity Multimedia
- State of the Art Phono Pre Amps
- High Performance Professional Audio
- High Fidelity Equalization and Crossover Networks
- High Performance Line Drivers
- High Performance Line Receivers
- High Fidelity Active Filters

3 Description

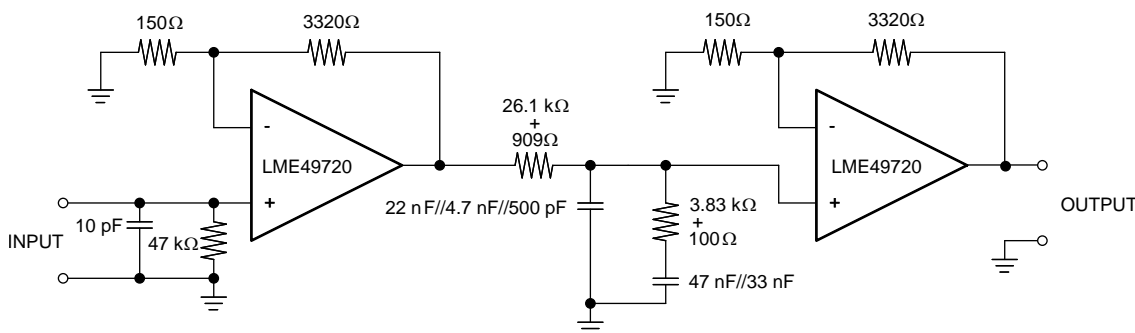

The LME49720 device is part of the ultra-low distortion, low noise, high slew rate operational amplifier series optimized and fully specified for high performance, high fidelity applications. Combining advanced leading-edge process technology with state-of-the-art circuit design, the LME49720 audio operational amplifiers deliver superior audio signal amplification for outstanding audio performance. The LME49720 combines extremely low voltage noise density ($2.7nV/\sqrt{Hz}$) with vanishingly low THD+N (0.00003%) to easily satisfy the most demanding audio applications.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
LME49720	TO-99 (8)	9.08mm × 9.08mm
	SOIC (8)	4.90mm × 3.91mm
	PDIP (8)	9.81mm × 6.35mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Passively Equalized RIAA Phono Preamplifier

Note: 1% metal film resistors, 5% polypropylene capacitors

6 Pin Configuration and Functions

Pin Functions

PIN				I/O	DESCRIPTION
NAME	SOIC	PDIP	TO-99		
V+	8	8	8	-	Positive supply voltage
V-	4	4	4	-	Negative supply voltage
InputA-	2	2	2	I	Negative audio input
InputA+	3	3	3	I	Positive audio input
Output A	1	1	1	O	Audio output A
InputB-	6	6	6	I	Negative audio input
InputB+	5	5	5	I	Positive audio input
Output B	7	7	7	O	Audio output B

7 Specifications

7.1 Absolute Maximum Ratings

 see ⁽¹⁾⁽²⁾⁽³⁾

		MIN	MAX	UNIT
Power Supply Voltage	$(V_S = V^+ - V^-)$		36	V
Input Voltage		$(V^-) - 0.7V$	$(V^+) + 0.7$	V
Output Short Circuit ⁽⁴⁾		Continuous		
Power Dissipation		Internally Limited		
Junction Temperature			150	°C
Temperature Range	$T_{MIN} \leq T_A \leq T_{MAX}$	-40	85	°C
Supply Voltage Range		$\pm 2.5V \leq V_S \leq \pm 17V$		V
Storage Temperature		-65	150	°C

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur.
- (2) Operating Ratings indicate conditions for which the device is functional, but do not ensure specific performance limits. For ensured specifications and test conditions, see Electrical Characteristics. The ensured specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
- (3) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.
- (4) Amplifier output connected to GND, any number of amplifiers within a package.

7.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM) ⁽¹⁾	All pins	2000	V
	Machine Model (MM), per EIAJ IC-121-1981 Application and Implementation	Pins 1, 4, 7 and 8	200	
		Pins 2, 3, 5 and 6	100	

- (1) Human body model, 100pF discharged through a 1.5kΩ resistor.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V^+, V^-	Supply voltage	± 2.5		± 17	V
T_A	Operating free-air temperature	-40		85	°C
T_J	Operating junction temperature	-40		150	°C

7.4 Thermal Information

THERMAL METRIC ⁽¹⁾		LME49720			UNIT
		D (SOIC)	P (PDIP)	LMC (TO-99) ⁽²⁾	
		8 PINS	8 PINS	8 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	107.9	72.9	150	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	52	77.2	35	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	48.3	44.9	–	°C/W
ψ_{JT}	Junction-to-top characterization parameter	8.2	35.7	–	°C/W
ψ_{JB}	Junction-to-board characterization parameter	47.8	49.9	–	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	N/A	–	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.
- (2) Thermal performance of a TO-99 package will depend strongly on mounting condition and there is no standard mounting configuration on a JEDEC PCB for that package type.

7.5 Electrical Characteristics

The following specifications apply for $V_S = \pm 15V$, $R_L = 2k\Omega$, $f_{IN} = 1kHz$, and $T_A = 25^\circ C$, unless otherwise specified.

	PARAMETER	TEST CONDITIONS	MIN ⁽¹⁾	TYP ⁽²⁾	MAX ⁽¹⁾	UNIT
THD+N	Total harmonic distortion + noise	$A_V = 1$, $V_{OUT} = 3V_{rms}$ $R_L = 2k\Omega$ $R_L = 600\Omega$		0.00003 0.00003	0.00009	%
IMD	Intermodulation distortion	$A_V = 1$, $V_{OUT} = 3V_{RMS}$ Two-tone, 60Hz & 7kHz 4:1		0.00005		%
GBWP	Gain bandwidth product		45	55		MHz
SR	Slew rate		± 15	± 20		V/ μs
FPBW	Full power bandwidth	$V_{OUT} = 1V_{P-P}$, $-3dB$ referenced to output magnitude at $f = 1kHz$		10		MHz
t_s	Settling time	$A_V = -1$, 10V step, $C_L = 100pF$ 0.1% error range		1.2		μs
e_n	Equivalent input noise voltage	$f_{BW} = 20Hz$ to $20kHz$		0.34	0.65	μV_{RMS}
	Equivalent input noise density	$f = 1kHz$ $f = 10Hz$		2.7 6.4	4.7	nV/\sqrt{Hz}
i_n	Current noise density	$f = 1kHz$ $f = 10Hz$		1.6 3.1		pA/\sqrt{Hz}
V_{OS}	Offset voltage			± 0.1	± 0.7	mV
$\Delta V_{OS}/\Delta T_{emp}$	Average input offset voltage drift vs temperature	$-40^\circ C \leq T_A \leq 85^\circ C$		0.2		$\mu V/^\circ C$
PSRR	Average input offset voltage shift vs power supply voltage	$\Delta V_S = 20V$ ⁽³⁾	110	120		dB
ISO _{CH-CH}	Channel-to-Channel isolation	$f_{IN} = 1kHz$ $f_{IN} = 20kHz$		118 112		dB
I_B	Input bias current	$V_{CM} = 0V$		10	72	nA
$\Delta I_{OS}/\Delta T_{emp}$	Input bias current drift vs temperature	$-40^\circ C \leq T_A \leq 85^\circ C$		0.1		$nA/^\circ C$
I_{OS}	Input offset current	$V_{CM} = 0V$		11	65	nA
V_{IN-CM}	Common-Mode input voltage range		(V+) – 2.0 (V-) + 2.0	+14.1 –13.9		V
CMRR	Common-Mode rejection	$-10V < V_{cm} < 10V$	110	120		dB
Z_{IN}	Differential input impedance			30		k Ω
	Common mode input impedance	$-10V < V_{cm} < 10V$		1000		M Ω
A_{VOL}	Open loop voltage gain	$-10V < V_{out} < 10V$, $R_L = 600\Omega$	125	140		dB
		$-10V < V_{out} < 10V$, $R_L = 2k\Omega$		140		
		$-10V < V_{out} < 10V$, $R_L = 10k\Omega$		140		
V_{OUTMAX}	Maximum output voltage swing	$R_L = 600\Omega$	± 12.5	± 13.6		V
		$R_L = 2k\Omega$		± 14.0		
		$R_L = 10k\Omega$		± 14.1		
I_{OUT}	Output current	$R_L = 600\Omega$, $V_S = \pm 17V$	± 23	± 26		mA
I_{OUT-CC}	Instantaneous short circuit current			+53 –42		mA
R_{OUT}	Output impedance	$f_{IN} = 10kHz$ Closed-Loop Open-Loop		0.01 13		Ω
C_{LOAD}	Capacitive load drive overshoot	100pF		16		%
I_S	Total quiescent current	$I_{OUT} = 0mA$		10	12	mA

(1) Tested limits are ensured to AOQL (Average Outgoing Quality Level).

(2) Typical specifications are specified at $+25^\circ C$ and represent the most likely parametric norm.

(3) PSRR is measured as follows: V_{OS} is measured at two supply voltages, $\pm 5V$ and $\pm 15V$. $PSRR = |20\log(\Delta V_{OS}/\Delta V_S)|$.

8 Parameter Measurement Information

All parameters are measured according to the conditions described in the [Specifications](#) section.

8.1 Distortion Measurements

The vanishingly low residual distortion produced by LME49720 is below the capabilities of all commercially available equipment. This makes distortion measurements just slightly more difficult than simply connecting a distortion meter to the amplifier's inputs and outputs. The solution, however, is quite simple: an additional resistor. Adding this resistor extends the resolution of the distortion measurement equipment.

The LME49720's low residual distortion is an input referred internal error. As shown in [Figure 109](#), adding the 10Ω resistor connected between the amplifier's inverting and non-inverting inputs changes the amplifier's noise gain. The result is that the error signal (distortion) is amplified by a factor of 101. Although the amplifier's closed-loop gain is unaltered, the feedback available to correct distortion errors is reduced by 101, which means that measurement resolution increases by 101. To ensure minimum effects on distortion measurements, keep the value of R1 low as shown in [Figure 109](#).

This technique is verified by duplicating the measurements with high closed loop gain and/or making the measurements at high frequencies. Doing so produces distortion components that are within the measurement equipment's capabilities. This datasheet's THD+N and IMD values were generated using the above described circuit connected to an Audio Precision System Two Cascade.

Figure 109. THD+N and IMD Distortion Test Circuit

Distortion Measurements (continued)

Complete shielding is required to prevent induced pick up from external sources. Always check with oscilloscope for power line noise.

Total Gain: 115 dB @ $f = 1$ kHz

Input Referred Noise Voltage: $E_n = V_0/560,000$ (V)

Figure 110. Noise Measurement Circuit

9 Detailed Description

9.1 Overview

The LME49720 audio operational amplifier delivers superior audio signal amplification for outstanding audio performance.

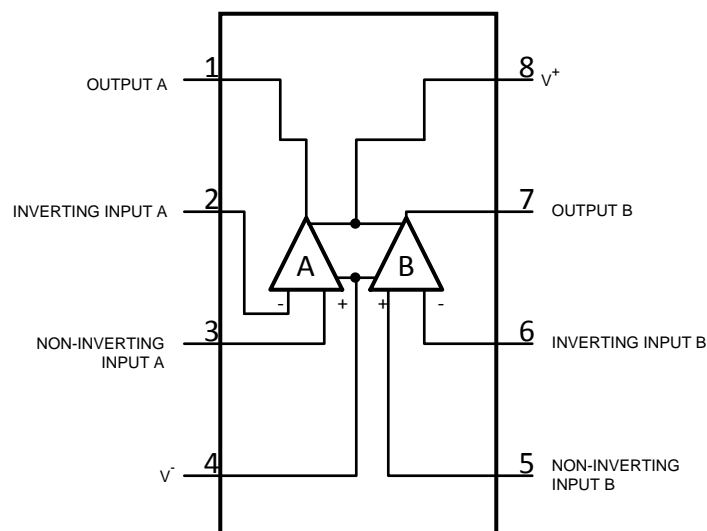

To ensure that the most challenging loads are driven without compromise, the LME49720 has a high slew rate of $\pm 20\text{V}/\mu\text{s}$ and an output current capability of $\pm 26\text{mA}$. Further, dynamic range is maximized by an output stage that drives $2\text{k}\Omega$ loads to within 1V of either power supply voltage and to within 1.4V when driving 600Ω loads.

The LME49720's outstanding CMRR (120dB), PSRR (120dB), and V_{OS} (0.1mV) give the amplifier excellent operational amplifier DC performance.

The LME49720 has a wide supply range of $\pm 2.5\text{V}$ to $\pm 17\text{V}$. Over this supply range the LME49720's input circuitry maintains excellent common-mode and power supply rejection, as well as maintaining its low input bias current. The LME49720 is unity gain stable. This Audio Operational Amplifier achieves outstanding AC performance while driving complex loads with values as high as 100pF .

The LME49720 is available in 8-lead narrow body SOIC, 8-lead PDIP, and 8-lead TO-99. Demonstration boards are available for each package.

9.2 Functional Block Diagram

9.3 Feature Description

9.3.1 Capacitive Load

The LME49720 is a high speed op amp with excellent phase margin and stability. Capacitive loads up to 100pF will cause little change in the phase characteristics of the amplifiers and are therefore allowable.

Capacitive loads greater than 100pF must be isolated from the output. The most straightforward way to do this is to put a resistor in series with the output. This resistor will also prevent excess power dissipation if the output is accidentally shorted.

9.3.2 Balance Cable Driver

With high peak-to-peak differential output voltage and plenty of low distortion drive current, the LME49720 makes an excellent balanced cable driver. Combining the single-to-differential configuration with a balanced cable driver results in a high performance single-ended input to balanced line driver solution.

Although the LME49720 can drive capacitive loads up to 100pF , cable loads exceeding 100pF can cause instability. For such applications, series resistors are needed on the outputs before the capacitive load.

9.4 Device Functional Modes

This device does not have operation mode.

10 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

10.1 Application Information

These typical connection diagrams highlight the required external components and system level connections for proper operation of the device. Any design variation can be supported by TI through schematic and layout reviews. Visit e2e.ti.com for design assistance and join the audio amplifier discussion forum for additional information

10.2 Typical Applications

10.2.1 Single Ended Converter

$$V_O = V_1 - V_2$$

Figure 111. Balanced To Single Ended Converter

10.2.1.1 Design Requirements

For this design example, use the parameters listed in [Table 1](#).

Table 1. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
Power Supply	±15
Speaker	2 KΩ

10.2.1.2 Detailed Design Procedure

10.2.1.2.1 Surface Mount Capacitors

Temperature and applied DC voltage influence the actual capacitance of high-K materials. [Table 2](#) shows the relationship between the different types of high-K materials and their associated tolerances, temperature coefficients, and temperature ranges. Notice that a capacitor made with X5R material can lose up to 15% of its capacitance within its working temperature range.

Select high-K ceramic capacitors according to the following rules:

1. Use capacitors made of materials with temperature coefficients of X5R, X7R, or better.
2. Use capacitors with DC voltage ratings of at least twice the application voltage.
3. Choose a capacitance value at least twice the nominal value calculated for the application.

Multiply the nominal value by a factor of 2 for safety. If a 10-μF capacitor is required, use 20μF.

The preceding rules and recommendations apply to capacitors used in connection with this device. The LME49720 cannot meet its performance specifications if the rules and recommendations are not followed.

Table 2. Typical Tolerance and Temperature Coefficient of Capacitance by Material

Material	COG/NPO	X7R	X5R
Typical Tolerance	±5%	±10%	80/–20%
Temperature	±30ppm	±15%	22/–82%
Temperature Range, °C	–55/125°C	–55/125°C	–30/85 °C

10.2.1.3 Application Curves

For application curves, see the figures listed in [Table 3](#).

11 Power Supply Recommendations

The LME49720 is designed to operate a power supply from $\pm 2.5\text{V}$ to $\pm 17\text{V}$. Therefore, the output voltage range of the power supply must be within this range. The current capability of upper power must not exceed the maximum current limit of the power switch.

11.1 Power Supply Decoupling Capacitors

The LME49720 requires adequate power supply decoupling to ensure a low total harmonic distortion (THD). Place a low equivalent-series-resistance (ESR) ceramic capacitor, typically $0.1\ \mu\text{F}$, within 2 mm of the V+ and V- pins. This choice of capacitor and placement helps with higher frequency transients, spikes, or digital hash on the line. In addition to the $0.1\ \mu\text{F}$ ceramic capacitor, it is recommended to place a $2.2\ \mu\text{F}$ to $10\ \mu\text{F}$ capacitor on the V+ and V- pins. This larger capacitor acts as a charge reservoir, providing energy faster than the board supply, thus helping to prevent any droop in the supply voltage.

12 Layout

12.1 Layout Guidelines

12.1.1 Component Placement

Place all the external components close to the device. Placing the decoupling capacitors as close as possible to the device is important for low total harmonic distortion (THD). Any resistance or inductance in the trace between the device and the capacitor can cause a loss in efficiency.

13 Device and Documentation Support

13.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

13.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

13.3 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

13.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

14 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
LME49720MAX/NOPB	ACTIVE	SOIC	D	8	2500	RoHS & Green	SN	Level-1-260C-UNLIM	-40 to 85	L49720 MA	Samples
LME49720NA/NOPB	ACTIVE	PDIP	P	8	40	RoHS & Green	Call TI SN	Level-1-NA-UNLIM	-40 to 85	LME 49720NA	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
